

# 3 Simple Requirements to Insure that your High Security Seal Vendors are ISO Compliant

1. Ask for their ISO 17712 Product Test Results
2. Ask for their lab's ISO Accreditation
3. Ask for their "Best Practices" Assessment

At BROOKS, we don't believe you should have to worry about the ISO compliance of your high security seals. That's why we're not only ready to show you these documents, we're making them readily available for viewing on our web site.

BROOKS barrier seals have been audited by ACT Laboratories and the American Bureau of Shipping (ABS.) Their test results is your assurance that our products meet and exceed the most stringent ISO standards. Furthermore, BROOKS was audited with an "assessment" that verifies that

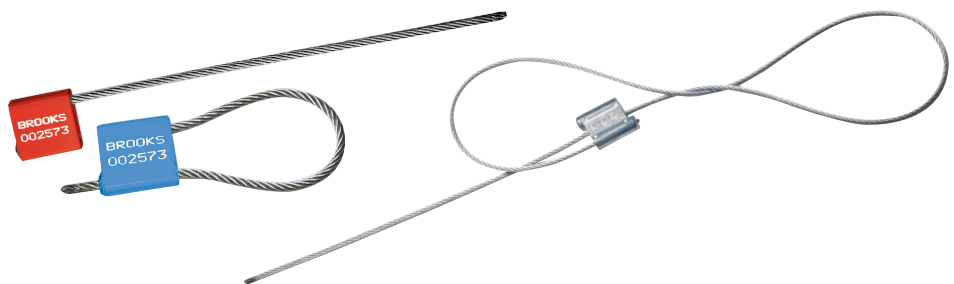

we conform to the manufacturer's "best practices" as outlined in Annex A of the ISO/PAS 17712 standard.

With nearly 60 locations worldwide, BROOKS is unique in its ability to drop-ship high security seals that comply with the C-TPAT / WCO Framework to your "stuffing sites" wherever they are and whenever you need them.

For WCO compliant, high-security barrier seals and a reliable, value-added, global delivery program that insures peace of mind, come to BROOKS.

\*This policy only guarantees that BROOKS products are ISO/PAS 17712 Compliant.
