LEADING THE WAY • SECURING THE WORLD

## Indicative Padlocks

Tamper Evidence Comes to Security and Reusability.

# Solid Brass: The Metal of Choice for Padlocks

Solid brass padlocks have been widely used for centuries to prevent theft in just about every sector, from industry to government and academia to agriculture. The reason is that brass padlocks are corrosion resistant and difficult to compromise. That is, unless the thief has a key. When an unauthorized individual does have a key, a padlock can be opened, the contents it is meant to protect are easily pilfered, the padlock is re-closed and no evidence will exist that a theft has occurred...until the lock is opened by the owner or consigner.

The BROOKS line of indicative padlocks is available in a broad range of body sizes, shackle diameters, shackle lengths and shackle materials. They can be keyed alike or separately, masterkeyed or grand-masterkeyed. Furthermore, BROOKS Indicative Padlocks can be keyed to some of the most popular keyways such as Master, Corbin, Yale, Best and others.

## **BROOKS Tamper Indicating Padlocks: Theft Prevention Meets Tamper Indication**

BROOKS Indicative Padlocks are the first to provide all the protection and reusability of classic padlocks, along with the tamper indication/deterrence feature of BROOKS single-use seals.

Unlike traditional padlocks that can be opened and re-closed without any evidence of tampering, BROOKS Indicative Padlocks feature a bored hole that passes through the body and shackle. Applying a uniquely numbered, BROOKS indicative seal through this cavity prevents the padlock from being opened, without first having to remove and thus destroying the seal.

The absence of a seal on the padlock suggests the possibility that the padlock was opened and security was compromised.

## Brooks Indicative Padlocks

### Locking body width 1 1/8" Shackle Diameter 3/16"

Model #	Shackle Clearance	Material	Padlocks Per Box
4920001	5/8"	Brass	12
4920021	1"	Brass	12
4920061	2"	Brass	12

### Locking body width 1 1/2" Shackle Diameter 9/32"

Model #	Shackle Clearance	Material	Padlocks Per Box
4920511	7/8"	Brass	12
4920513	7/8"	Stainless Steel	12
4920543	1 1/2"	Stainless Steel	12
4920541	1 1/2"	Brass	12
4920571	3"	Brass	12

### Locking body width 1 3/4" Shackle Diameter 5/16"

Model #	Shackle Clearance	Material	Padlocks Per Box
4920611	7/8"	Brass	12
4920613	7/8"	Stainless Steel	12
4920661	2"	Brass	12
4920663	2"	Stainless Steel	12
4920671	3"	Brass	12
4920673	3"	Stainless Steel	12
4920681	4"	Brass	12

### Locking body width 2" Shackle Diameter 3/8"

Model #	Shackle Clearance	Material	Padlocks Per Box
4920921	1"	Brass	6
4920923	1"	Stainless Steel	6
4920961	2"	Brass	6
4920963	2"	Stainless Steel	6
4920981	4"	Brass	6

## Double Ball Locking Padlocks

### Locking body width 1 3/4" Shackle Diameter 5/16"

Model #	Shackle Clearance	Material	Padlocks Per Box
4920XG1	1 1/8"	Brass	6
4920XG3	1 1/8"	Stainless Steel	6
4920X61	2"	Brass	6
4920X63	2"	Stainless Steel	6
4920X71	3"	Brass	6
4920X73	3"	Stainless Steel	6

### Locking body width 2" Shackle Diameter 3/8"

Model #	Shackle Clearance	Material	Padlocks Per Box
4920Y63	2"	Stainless Steel	6

## Accessories for all Locks

Painting

Master Keying

Additional Cut Keys (Other mfg keyways)

Locks Keyed to Other Mfg Keyways

Block Printing

Sequential Numbering Lock

Sequential Numbering Key

Non-Sequential Numbering Lock

Non-Sequential Numbering Key

9" Steel Chain on Shackle

9" Brass Chain on Shackle

\*Please note that locks made to other manufacturers' keyways are supplied without keys unless specified (additional charge).

\*Minimum order quantity is 12 locks.

\*Locks keyed alike supplied with 1 key ea. / Keyed differently with 2 keys ea.

\*Hole size is 5/64" for models 4920001, 4920021 and 4920061. For all remaining models, indicative hole size is 1/8".

## Unique Identification: Record Keeping of Events

BROOKS Indicative Padlocks further advance security by providing two additional benefits. First, they deter theft attempts because thieves won't be able to replace or repair the uniquely numbered seals. Second, by recording and confirming the seal's unique identification number each time the padlock is opened, it's easy to isolate the time frame in which a theft may have occurred.

# BROOKS Indicative Seals

The following indicative seals are recommended for use with BROOKS Indicative Padlocks. Each of these seals can be heat stamped with a company name and sequential number.

**Toolless Roto-Seal®** – provides security as a safe alternative to traditional lead and wire seals, but requires no sealing tool. It features a large flag, which is heat stamped with company name or logo and is sequentially numbered.

**Spring Lok® with long spear** – is applied using one hand and removed with a simple twist. Its spring action indicates if the seal has been broken, or if tampering attempts have occurred. Available in a choice of colors.

**Secur-Pull®** – can be heat stamped with company name/logo, consecutive numbering, or with bar coded labels. Adjustable and easy to install and remove, it is available in mats of 10 units.

**Multi-Lok®** – is a high-security, disposable, braided steel cable-seal 12” long and 1/16” in diameter. Company name, bar coding and consecutive numbering is available by ink-jet, heat stamping or laser etching. Removal requires a simple wire cutter.

**Bi-Directional Seal** – adjustable and consecutively numbered the Bi-Directional Seal can be sealed on either side of the locking housing, which ensures proper sealing engagement and assured security. Like all indicative seals, it's removable without a tool and it will reveal tampering or theft if the Indicative Padlock has been compromised.

**Pull-Tite Seal** – is an economical and adjustable tamper evident seal. Each seal is sequentially numbered and formatted with ten seals per mat. A consecutive number and company name or logo can be heat stamped on the seal's flag.

## BROOKS: The Company of Choice for Security

BROOKS has a long history and an enviable reputation for developing highly innovative and effective products that deter theft and indicate if tampering has occurred. No wonder that it took a company with our experience to recognize the needed improvement in traditional padlocks and to develop a broad line of indicative padlocks that reveal tampering events.

## E.J. BROOKS COMPANY

BROOKS is known throughout the world as the premier supplier of tamper evident / theft prevention security devices. We're dedicated to providing you with the finest selection of quality products to meet your security requirements

The BROOKS corporate mission is to provide industry and government with the broadest range of security solutions to prevent, deter and indicate theft and tampering. We carry out that mission by not only offering the widest assortment of security options, but also by assuring you of the finest design, materials and workmanship.

As a 135-year-old international supplier of security sealing devices to the airline, retail, transportation, utility and money handling industries, BROOKS is parent to 10 locations.
